

Shipping App on BPortaly

The ultimate solution to automating the Shipping process and making business operations easy!

Gone are the days when managing shipping operations was a tussle for businesses! With Shipping App, the whole shipment process gets simplified, and logistical efficiency increases. The portal allows users to select the best carrier among the available ones in the network and create and print BOL, shipping/packing labels, address labels, and pickup instructions with just a few clicks. Shipping App comes under BPortaly and aims to provide an automated solution to businesses for shipping-related pursuits. It focuses on helping businesses to save time and minimize error while ensuring easy and fast shipments.

Rate Quote

The portal allows users to request quotes from different carriers. Upon receiving them, they can choose the best among the available ones as per their needs and requirements.

Print Shipment Documents

This is one of the crucial features of the Shipping App as post shipment, users get the option to print BOL, Ship Label, Packing List, and UCC 128.

Multi-Carrier Shipping

This is another crucial feature of the Shipping App, which allows users to choose multiple carrier options in one shipment. The details of each carrier, such as tracking number, freight cost, etc., are stored separately.

Shipping Workbench

Users can also view a list of sales orders to be delivered and sales delivery for which the package is yet to be created. This can be done by sorting the order of their shipment date.

Process Real-time Shipment

The portal allows users to request quotes from different carriers. Upon receiving them, they can choose the best among the available ones as per their needs and requirements.

Allocate Carrier

Users can allocate a carrier to the sales order/sales quote before the shipment. It works in a process where an order entry operator talks with the customer over the phone to discuss the best carrier option as per their choice and preference.

Tracking

The Shipping App facilitates easy and seamless monitoring of the parcel status from a given carrier.

Reports

The Shipping App supports detailed reporting wherein all the shipments done in the last few days or from specific carriers in a particular period can also be listed and checked.

About Greytrix

With more than 23 years of experience, Greytrix is one of the top-rated service providers for CRM and ERP systems.
