Key Highlights of GUMU™ for Salesforce – Sage 50 (US) Integration

System administrators are given the freedom to set different access levels to integration functionality for every user using the robust security matrix of GUMU™.

Authorization Control

Enjoy seamless entity synchronization like easy mapping and importing any custom or standard Sage 50 entity data into standard or custom Salesforce objects using GUMU™.

Entity Synchronization

Easily promote entities such as Customer details and Transactional data like sales quotes, sales orders, and invoices from CRM to ERP.

Data Promotion

Easily import/export entity mapping in sync routines. The feature also allows users to modify data in the file.

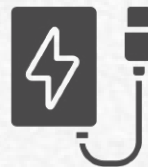

Export/Import Mapping

Use the Standard functionality in Salesforce with the help of GUMU™ for creating opportunities and quote items and convert them into sales orders.

Salesforce Standard Opportunity

Enjoy easy access to integration across different devices and access data anytime, anywhere.

Portable Devices

Explore data from both systems for better business insight using Einstein Analysis. It highlights opportunities and predicts outcomes through intuitive reports and dashboards.
